

Wencong Chen

Phone: 17810345209 | Email: chen_career@sina.com

Profile

- 6+ years of B2B technical presales, solution consulting, tender support, and complex project coordination across large electromechanical systems, intelligent hardware, enterprise software workflows, and digital solutions; prepared to support customer-facing AI, embodied robotics, and dexterous-hand opportunities.
- Proven ability to lead discovery, requirements clarification, scenario decomposition, solution architecture and product selection, proposals and presentations, demonstrations and POCs, engineering coordination, deployment, training, and acceptance reviews, translating complex technology into customer value and executable delivery plans.
- Interdisciplinary background in mechanical engineering, automation, aerospace engineering, and artificial intelligence, with solution-level knowledge of LLMs, RAG, AI agents, robot bodies, sensors, actuators, machine vision, and end effectors; effective at aligning business goals, technical boundaries, safety risks, and acceptance criteria.

Education

Illinois Institute of Technology | Artificial Intelligence | Master's | 2021 - 2024

Syracuse University | Mechanical and Aerospace Engineering | Master's | 2013 - 2015

Beijing University of Chemical Technology | Mechanical Engineering and Automation | Bachelor's | 2008 - 2012

Work Experience

Canon (China) Co., Ltd. | Senior Solutions Specialist

Jun 2025 - Dec 2025

- Mapped product capabilities, integration scope, and operating boundaries across multifunction printers and localized third-party software, providing hardware-software solution inputs for product selection, technical discussions, and opportunity development.
- Coordinated third-party vendors and internal software teams through requirements confirmation, interface alignment, scheduling, version releases, and issue closure, converting customer needs into actionable engineering tasks and delivery checkpoints.
- Researched competing software, features, and pricing; distilled differentiators, alternatives, and market intelligence to support sales positioning and opportunity assessment.
- Built a reusable case library and produced sales decks, brochures, technical notes, and customer communications; coordinated service teams and partners on incident explanations, customer assurance, and corrective-action tracking.

Kodak Alaris Management (Shanghai) Co., Ltd. | Solutions Consultant and Product Presales

May 2022 - May 2024

- Delivered presales consulting for document scanners, drivers, Capture Pro, and InfoInput, translating document types, processing volumes, data flows, software environments, and operating procedures into configurations and workflow solutions.
- Supported Dell's historical-document digitization upgrade through multi-scenario discovery, POC testing, hardware selection, software deployment, on-site validation, and user training, contributing to successful delivery of an RMB million-scale engagement and an extended maintenance agreement.
- Supported RFI/RFP and tender processes by preparing technical proposals and responses, delivering product demonstrations and functional tests, answering technical questions, and communicating product capabilities, constraints, and business value.
- Connected sales, product, channel, and delivery teams from presales through implementation; resolved installation, driver, configuration, and usage issues and converted field feedback into training materials, technical documentation, and product-improvement inputs.

Nuctech Company Limited | Market Support Engineer

Jul 2017 - Jul 2021

- Supported large-scale cargo inspection system opportunities for customs, ports, terminals, and logistics parks, translating site conditions, workflows, safety constraints, and performance requirements into equipment configurations and system solutions.

- Prepared technical proposals, compliance and deviation matrices, test and acceptance plans, and handover checklists, aligning tender requirements, product capabilities, solution commitments, and acceptance criteria.
- Coordinated 6+ functions, including market, product, physics, radiation protection, civil engineering, software, and manufacturing, to consolidate technical inputs, close risks, converge solutions, and complete post-award handover.
- Explained system architecture, deployment prerequisites, interfaces, risks, and acceptance paths in customer and sales discussions, providing traceable technical inputs for commercial decisions and downstream delivery.

Relevant Practice

- Enterprise AI Presales Solution and POC Design | Personal Solution Exercise: Designed solution concepts for enterprise knowledge retrieval, intelligent customer service, and workflow automation using LLM, RAG, and agent patterns; mapped data sources, access control, prompts, tool calls, human review, system interfaces, process flows, and solution architecture.
- Prepared a discovery checklist, demo script, and POC scorecard covering answer accuracy, source traceability, hallucination and privilege risks, latency, cost, and human handoff, with explicit boundaries between prototype validation and production delivery.
- Embodied Robotics Scenario Solution and Acceptance Demo | Personal Technical Exercise: Combined offline interactive demos to decompose natural-language needs into business goals, robot tasks, environmental constraints, voice and vision modules, knowledge sources, safety policies, human takeover, orchestration logic, and fallback paths.
- Designed a robot POC scorecard around task completion, response time, continuous-operation stability, safety triggers, exception recovery, and usability for hypothetical education, exhibition, and commercial-service scenarios; this was not a customer deployment.
- Dexterous Hand Selection and Grasp Validation | Personal Solution Exercise: Built a requirements matrix for research, flexible manufacturing, and service-robotics scenarios, comparing degrees of freedom, payload, grip force, repeatability, size and weight, tactile and visual feedback, communications, control methods, and safety constraints.
- Planned a grasp-testing dataset and log covering object size and material, pose, success rate, cycle time, slip and damage risk, calibration, recovery, and maintainability; the exercise did not use physical dexterous-hand hardware and does not represent a customer project or production deployment.

Skills

- Presales & Solution Consulting: customer discovery, requirements analysis, scenario decomposition, solution architecture, product selection, proposals, presentations, RFI/RFP, tenders, demonstrations, POCs, and technical clarification.
- AI Solutions: working knowledge of LLMs, RAG, AI agents, prompts, knowledge bases, API integration, data governance, access control, hallucination mitigation, and evaluation, with a focus on verifiable business use cases.
- Robotics & Dexterous Hands: interdisciplinary mechanical, automation, and AI foundation; solution-level understanding of sensors, actuators, machine vision, end effectors, task flows, safety boundaries, fallback strategies, and acceptance criteria.
- Project & Delivery: cross-functional project coordination, interface and version management, site surveys, risk registers, installation and commissioning, customer training, handover, acceptance reviews, and post-sales issue closure.
- Communication & Deliverables: advanced Word, Excel, and PowerPoint skills for proposals, bids, competitive analyses, training, and event support; able to build offline HTML/JavaScript demos and work with English technical documentation.
